Name
SlackHook
Type
http in
ID
40c91d4d.bf38e4
Properties
Provides an input node for http requests, allowing the creation of simple web services.
The resulting message has the following properties:
msg.req : http request
msg.res : http response
For POST/PUT requests, the body is available under msg.req.body . This uses the Express bodyParser middleware to parse the content to a JSON object.
By default, this expects the body of the request to be url encoded:
foo=bar&this=that
To send JSON encoded data to the node, the content-type header of the request must be set to application/json .
Note: This node does not send any response to the http request. This should be done with a subsequent HTTP Response node.
