Node

Name SlackHook

Type http in

ID 40c91d4d.5f38e4

Properties

Provides an input node for http requests, allowing the creation of simple web services.

The resulting message has the following properties:

- msg.req : [http request](#)
- msg.res : [http response](#)

For POST/PUT requests, the body is available under `msg.req.body`. This uses the [Express bodyParser middleware](#) to parse the content to a JSON object.

By default, this expects the body of the request to be url encoded:

```
foo=bar&this=that
```

To send JSON encoded data to the node, the content-type header of the request must be set to `application/json`.

Note: This node does not send any response to the http request. This should be done with a subsequent HTTP Response node.
