

# 우선, Arduino로 해볼까요?

# Arduino를 쓰실 분은 Arduino IDE를 꼭 설치하신 다음에,

A terminal window with a dark background and light-colored text. The window has two tabs at the top: 'robert-nad' and 'brew'. The terminal shows the command 'brew cask install arduino' being executed. It displays the 'Caveats' section, which states that Arduino requires Java and provides the command 'brew cask install java'. It then shows 'Satisfying dependencies' and 'Downloading' a zip file from the Arduino website. A progress bar at the bottom right indicates that 16.7% of the file has been downloaded.

```
→ ~ brew cask install arduino
⇒ Caveats
arduino requires Java. You can install the latest version with

brew cask install java

⇒ Satisfying dependencies
⇒ Downloading https://downloads.arduino.cc/arduino-1.8.5-macosx.zip
##### 16.7%
